

Are you practicing Safe Sealing?

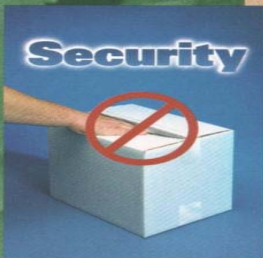

Make sure your packages are secure.

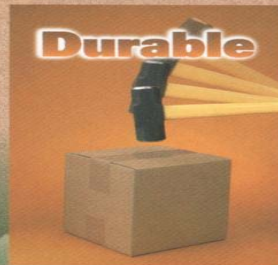

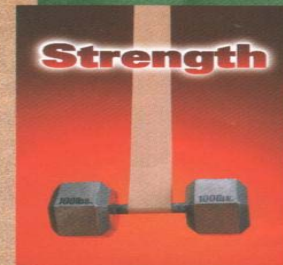

As a Packaging Specialist, GTI encourages our customers to use Water Activated Gummed Tapes, because it's the most effective sealing method. The use of less secure, Plastic-Pressure Sensitive Tape increases the cost due to the higher material usage, and higher risk of lost goods. Furthermore independent research has proven that Water Activated Tape brings superior protection while saving time and money, because it's the most secure seal. Water Activated Tape actually bonds with a carton's surface while temperature extremes like a hot warehouse, a cold environment or a delivery truck can loosen Plastic Tapes. Contact us if you would like a copy of the report or view it on www.packagesecurity.com.

For packaging security GTI Industries offers a complete line of Water Activated Gummed Tapes available in assorted varieties:

- Paper Gum Tape
- Reinforced Gum Tape
- Printed Gum Tape
- White or Kraft Gum Tape

The advantages
of reinforced
tape are
powerful!
